Company Profile

Advanced Connection Technology Ltd

CONTENTS

- 1 About us
- Design & product application
- 3 Quality & Manufacturing
- 4 Corporate culture

Advanced Connection Technology Ltd. is located in Shenzhen, China. CACT is a company which mainly produces various types of automotive PCBA modules, automotive wiring harnesses and peripheral products of automotive connector.

CACT is a national high-tech enterprise integrating product design, development, manufacturing and processing. CACT adheres to customer demand-oriented, continuous innovation and quick response, committed to providing customers with high-quality and efficient products and services on a global scale.

2. Floor space :7267 m^2

3. Total number of employees : 300

4. production line:

Modules 14,

Automotive wiring harnesses 8
Connectors15, medical products 1

5. Monthly capacity:

5.1. Module (PCBA): 2KK/M

5.2. Automotive wiring harnesses:

1KK/M

5.3. Connector: 5KK/M

5.4. metal mold: 12sets/M

5.5. Plastic mold: 10sets/M

6.Main products:

USB modules / automotive wiring harnesses / automotive connector etc.

7. Product sales: Twenty-four million dollars

CACT History

2000----Established the factory

2003----Passed ISO 9001(2000 version) Qualification Certification

2004----Passed ISO 14001 Qualification Certification

2007----Passed TS 16949:2002 Qualification Certification

2007----Won the automotive client: Casco

2010----Won the automotive client: TECVOX

2011----Won the automotive client: Chrysler/Fiat/GM

2012----Won the automotive client: Harman

2015----Company listing

2016----Won automotive client: GAC Trumpchi

2016----Passed IATF16949:2016及ISO13485:2016 Qualification Certification

2017----Won the honor of "State High-tech Enterprise"

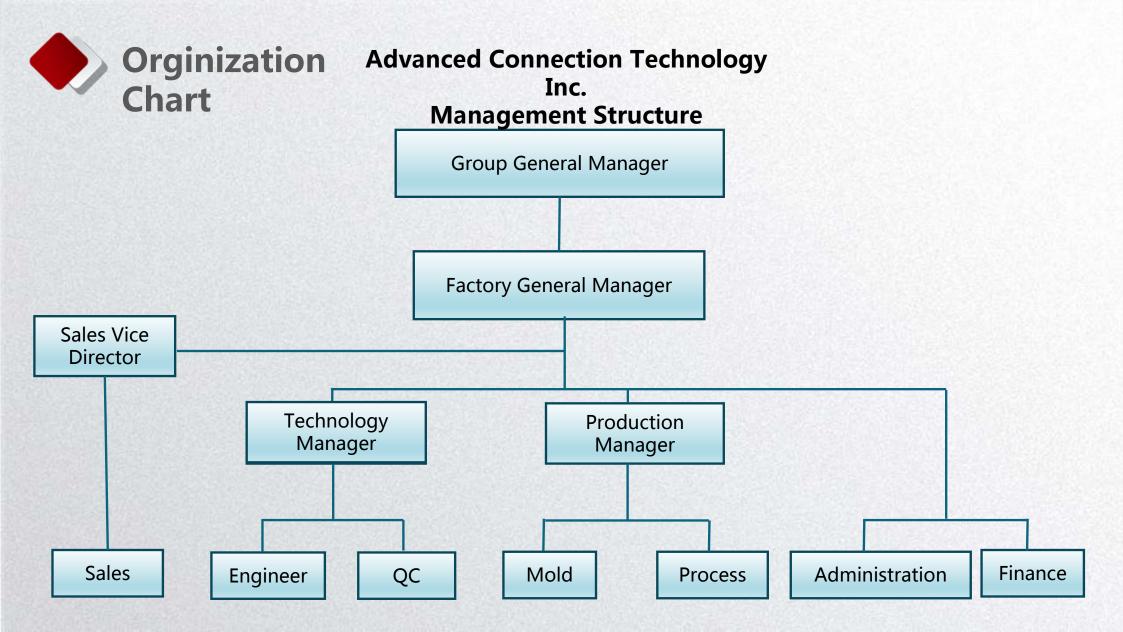

2018----Won the automotive client: GAC New Energy

2019----Passed AS9100: 2016 Qualification Certification

2022----Won automotive client: BAIC

Marketing network

Customer - oriented

Our products are exported to Southeast Asia, Europe, America, etc.

Real-time SPC system: seamless connection with the measurement room automatic measurement system, automatic real-time SPC analysis of quality and process data for each period of time, early warning at the beginning of the trend change (automatically send mail step by step to notify the relevant personnel), can timely discover potential quality or process problems, so as to prevent and improve quality and process

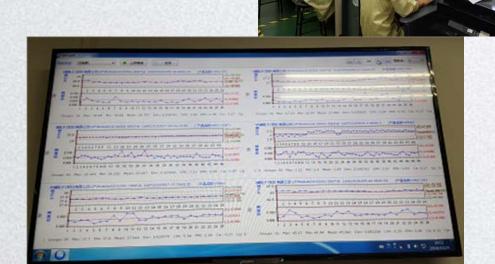

Capability Index of CPK

problems in advance.

- Result < 1.67 Early warning and continuous attention
- Result < 1.33 Stop the production and improve

Quality system - MES system

MES traceability system links parts, machines, personnel, test results and products effectively through scanning, and uploads servers to achieve one-to-one traceability effectively. MES system can export online reports, automatically feed back the real data of production and quality to the production Kanban and server, and gradually realize paperless operation.

Tracking of staff, machine and material

Product Quality Control Process

Injection Molding Process

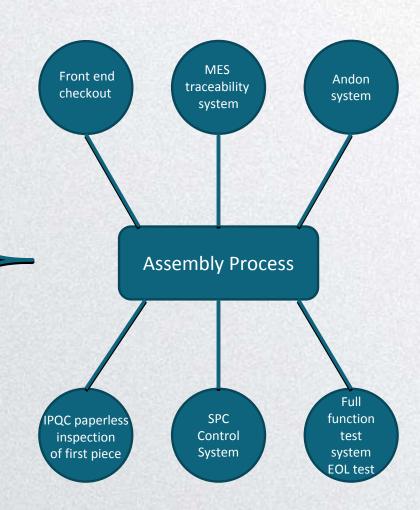

- Moisture content inspection
- Moulding parameter checkout
- Appearance inspection by microscope
- Size inspection in 2.5 dimension

Stamping Process

- Hardness test
- Stamping parameter checkout
- Appearance inspection by microscope
- Size inspection in 2.5 dimension

Feeding Process

- Plating thickness inspection
- RoHS test
- Appearance inspection by microscope
- > Size inspection in 2.5 dimension
- Function test

- > Safe Launch 100% inspection
- Vibration test
- Full inspection of appearance
- > Full inspection of function

FQC Process

- Package scanning
- > ERP implement First-in, First out
- Management & tracking of delivery records
